

# The Forage Privacy Policy

## **What is the app?**

The Forage is a geolocation-based game which uses your device's sensor data (GPS, accelerometer, gyroscope, compass) to run its main logic and functionalities and camera for secondary functionalities (QR code reader).

## **What information does the app collect and how is it used?**

The only information the game collects and stores are some few GPS coordinates (when the player sets a new Vault Access Point ingame). It also stores your Google account information via safe authentication, so your data is protected.

The device's camera usage is merely for QR code reading functionalities, no image data is collected.

All data is stored locally on your device, but is automatically uploaded to a cloud storage service for backup (Google's Firebase). Your data is not used for anything else.

## **How much information is shared to third-parties?**

None.
